

**The Project Management Experts[®]**

PM Solutions is a project management firm helping organizations govern, manage, and measure their portfolios to improve business performance.

Project Management Maturity Advancement

Advancing project management maturity improves your organization's effectiveness at executing projects. Using PM Solutions' highly acclaimed Project Management Maturity Model (PMMMSM), we work with our clients to assess the current level of maturity, develop an achievable improvement plan, and help keep the momentum going by supporting the execution and measurement of the recommended improvements.

Project Management Maturity Assessment

PM Solutions begins by assessing your organization's current project delivery capability and project management maturity level. We then apply the PMMM as a guide to determine your current maturity level, your desired future level, and the targeted areas in which your investments should be focused in order to advance. The appropriate target level of maturity varies for each organization based on specific goals, strategies, resource capabilities, scope, and needs.

Improvement Plan

Results from the Assessment are used to develop specific recommendations and a sequenced roadmap that provides realistic milestones for short and long-term process improvement activities. PM Solutions' works with you to ensure that the plan also addresses change enablers that will help overcome cultural barriers.

Ongoing Support to Deploy The Plan

Implementation planning efforts define the framework around performance measurement processes and data collection that will be used to support ongoing measures program implementation. We help guide you through the identification of the data collection team, data sources, and data collection processes, including information systems needed to support the processes.

PM Maturity Re-assessment

A key element of our approach is to re-assess maturity once improvements are made in order to highlight advancements that have been achieved. To accomplish this, PM Solutions conducts an abbreviated maturity assessment and compares the newer findings with your baseline maturity level. The re-assessment results are reviewed against your original improvement plan. New and/or supplemental recommendations are provided to reflect current business priorities and areas of focus for further progression.
