

**The Project Management Experts[®]**

PM Solutions is a project management firm helping organizations govern, manage, and measure their portfolios to improve business performance.

Project Portfolio Management (PPM)

Working on the right projects at the right time is critical to sustain a competitive advantage, yet many organizations struggle with allocating limited resources and assets wisely. PM Solutions' project portfolio management (PPM) approach helps you select and manage an optimal portfolio of projects - one that maximizes your organization's responsiveness, revenues, and adaptability while keeping the projects aligned with your strategic business goals and objectives.

PM Solutions helps structure your PPM practices to provide your organization with a consistent way to select, prioritize, and manage projects that deliver maximum business value.

Project Portfolio Management Assessment

PM Solutions assesses your current project portfolio management processes and, in collaboration with you, identifies the appropriate level of PPM discipline for your organization. We then apply our best-in-class [Project Portfolio Management Maturity Model](#) to determine your current PPM capability and identify process gaps between your organization's current state and desired future state. We provide the roadmap for improvements and work with you to develop the implementation plan.

Portfolio Process Improvement

Results from the assessment are used to define an approach to improve your organization's ongoing portfolio management practices. PM Solutions partners with you on the development and delivery of the recommended approach and improvement plan, including a cost/benefit analysis for taking the next steps in optimizing your PPM practices that yields better alignment with your business objectives.

We help you integrate your PM and PPM processes to enable you to select the best project portfolio aligned to your strategic plan. Forecasting and optimizing the use of available resources is an integral part of PPM. Monitoring project and portfolio performance ensures investment decisions remain the best choices in your changing world. Portfolios are continually evaluated. Prioritization is an iterative process and your portfolio must be reprioritized as business conditions, resources, and budgets change.

Portfolio Improvement Execution

PM Solutions provides you with guidance and implementation support to quickly deploy the PPM improvement recommendations. Activities typically include:

- Establishment or refinement of portfolio governance policies
- Alignment of portfolio decisions to strategic business goals
- Portfolio and program prioritization and selection facilitation
- Portfolio Review Board session facilitation
- Portfolio and project communication management
- Optimized resource planning including “what if” scenarios
- Portfolio performance management
- PPM software tool selection and process implementation
- PPM workshops, training, and mentoring for executives, management, and staff
- PPM adoption and culture change management

Helping You Manage Your Project Portfolio

When you integrate dynamic PPM practices into your business cycle, you can be assured your organization is delivering projects most essential to strategy execution and corporate performance.
